

## perfecta: aerosol therapy at its absolute best

Perfecta spacer mask for adults and children

- particle size 1– 5 microns
- relatively short treatment time
- greater volume for increased peripheral deposition of the drug
- easily tolerated by users of any age, thereby increasing the treatment's effectiveness

For the local (\*) treatment of:

- respiratory infections of bacterial or viral origin
- asthma
- bronchitis
- pneumonia
- cystic fibrosis

(\*) Localised intake of smaller quantities of drug compared to systemic treatment reduces side effects and enhances effectiveness.

perfecta  
can be used with any  
piston-operated aerosol device.

Cod. 810223 08/2009

The **new PERFECTA spacer mask** is designed for treating disorders of the lower airways. It is specially shaped for use with adults and children. With Perfecta, **treatment is quick, safe and effective.**

Air Liquide Medical Systems has once again come up with an ingenious device offering patients of all ages a better quality of life - anywhere and at all times.

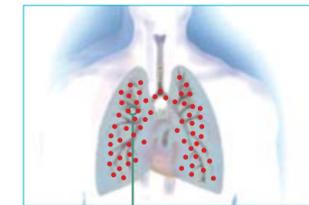

**perfecta**  
one mask for both adults and children

**Perfecta**, which comes with the Mefar 2000 nebuliser, is a **new spacer mask** for aerosol therapy and can be used by both adults and children.

It sprays the drug **straight into the target organ**, and the whole treatment only takes **two minutes.**

Perfecta has a **larger SPACER MASK** to allow **enhanced drug deposition in the peripheral area of the lungs** and less in the mouth and pharynx.

Particle size 1-5 microns.

**perfecta**  
is a mouth and nose mask for children

When used with children, the mask must be **placed over the mouth and nose.**

The special shape of the mask and the soft material mean it

can also be used with **very young children**, who are not usually very cooperative.

A **valve** on the fitting relieves any overpressure.

**perfecta**  
is a mouth and nose mask for adults

When used by adults, the mask must be **placed over the mouth**, with the top edge up against the nose.

For effective treatment, the user should breathe in through the mouth and out through the nose.

If you breathe out through the mouth, the **valve** on the fitting relieves any overpressure.

The **PERFECTA mask** features a perfect **ergonomic design**.  
It is made of silicone, an **anallergic material that is soft and pleasing to the touch**.  
This makes it very easy to wear by patients of any age and improves compliance by adults and children.
